while .business management problems. It comprises of modules, which can be used independently or together. The programs are written using Microsoft Visual Basic.NET. The newest version of MSS is 8.0. It was released in June 2017, nearly two and a half years after the previous version was released. This version improves the structure of the programs, which improves their usability. The newest version of MSS contains three programs: MSSIS, MSSIT and MSSF. MSSIS stands for the Management and Support System – Integrated Tasks. It allows the user to run and analyze similar tasks that can be grouped together under one single module. MSSIT stands for the Management and Support System – Integrated Tools. It allows the user to create tools for themselves, which can be integrated into MSS. MSSF stands for the Management and Support System – Fast, which allows the user to quickly analyze large numbers of tasks. History The idea behind the development of MSS was to create a program which would make it possible for business professionals and managers to work on common business problems and to analyze

---

them. This should make it possible to develop more accurate and faster solutions to common business problems. The first version of MSS was published in 2002 and it was released a year later. MSS was designed to solve small-scale problems such as the development of a warehouse management system. A year after the release of the first version, the programs were re-written in the form of Visual Basic.NET (VB.NET) and improved to make them more usable. Programs References External links Category:Business softwareChlamydia trachomatis and Neisseria gonorrhoeae among HIV-infected patients: the role of co-infection. Chlamydia trachomatis and Neisseria gonorrhoeae are responsible for sexually transmitted diseases, and their importance is increasing in HIV-infected patients. In this study, we investigated the prevalence and associated factors of Chlamydia trachomatis and Neisseria gonorrhoeae co-infection in an HIV/AIDS clinic. Data were retrospectively extracted from the files of patients who attended an HIV/AIDS clinic at the National Centre for AIDS/STD Control and Prevention, Harare, Zimbabwe, between March 1, 2005 and December 31, 2006. Patients with a 82157476af
